(54) Title: DETECTOR ARRANGEMENT

(57) Abstract: The invention relates to a detector arrangement for the conversion of electromagnetic radiation into electrical signals. The detector arrangement includes sensitive areas (D1, D2, D3, D4), where each sensitive area corresponds to a respective electrical signal, and at least two of the sensitive areas mesh with one another in such a manner that non-overlapping envelopes (C1, C2, C3, C4) of the individual meshing sensitive areas also mesh with one another.
